Pune, Maharashtra, India

EDUCATION

MIT ADT University

Jul 2021 – Jul 2025

B.Tech in Computer Science Engineering

EXPERIENCE

Zensar Technologies | Client: NVIDIA

Nov 2025 – Present

Jr. Python Developer

Pune, Maharashtra, India

- Designed automated data ingestion and validation pipelines for 500+ session-based datasets weekly, ensuring structured and consistent data via metadata enhancements and retrieval workflows; built a PostgreSQL pipeline to centralize data and enable real-time sync with Google Sheets for improved visibility; developed an LLM-powered RAG-based AI chatbot for query handling and issue logging, improving response efficiency and reducing manual effort.
- Developed Python automation scripts and GUI tools to preprocess, validate, and manage large-scale dataset uploads to AWS S3 and Google Drive, implementing failure detection and automated reprocessing to ensure dataset integrity and pipeline stability; tested and validated code updates from NVIDIA's US team for compatibility with local data workflows.

Chat360

Jun 2025 – Sept 2025

AI Engineer Intern

Pune, Maharashtra, India

- Designed and deployed a production-ready Agentic AI backend integrating RAG pipelines and vector databases, enabling context-aware autonomous decision workflows for enterprise clients.
- Optimized scalable embedding, LLM orchestration and retrieval pipelines handling 2k+ monthly queries, improving contextual accuracy by 22% and reducing response time by 30%; Developed benchmarks to reduce LLM hallucinations.

Chat360

Mar 2025 – Jun 2025

Technical Product Intern

Pune, Maharashtra, India

- Designed and launched cross-platform analytics dashboards for WhatsApp, Facebook, and Instagram DM campaigns, consolidating campaign data across client deployments and improving engagement visibility while accelerating optimization cycles.
- Built bilingual sentiment analysis and AI-powered reply automation workflows, reducing manual moderation effort by 30% and improving response turnaround time by 25%, while collaborating in agile sprints to ship an Agentic AI module.

Texas A&M University–Texarkana

Jun 2024 – Jul 2024

Research Fellowship Intern

Texarkana, Texas, USA

- Evaluated deepfake detection models through dataset analysis and benchmarking; collaborated with an international research team and led the project to win the Best Project Award.

PROJECTS

Elevating Education with Sentiment Analysis and PowerBI Insights — Python, Power BI, NLTK, TextBlob

- Developed an end-to-end sentiment analysis pipeline using Python (NLTK, TextBlob) with web-scraped student feedback, and built Power BI dashboards to deliver trend analysis and actionable insights for improving course engagement.

Inventory Management System — Python, MySQL

- Built a Python-MySQL based GUI application with secure user roles, real-time inventory tracking, order management, and graphical reporting to monitor stock, sales, and purchases efficiently.

TECHNICAL SKILLS

Languages: Python, SQL

Frameworks: Django, React.js, FastAPI, Laravel

Databases: PostgreSQL, MySQL, MongoDB

Developer Tools: Git, Docker, Linux, JIRA, Postman, Power BI

Libraries: TensorFlow, OpenAI, Scikit-learn, Keras, Pandas, NumPy, Matplotlib, OpenCV, YOLO

Cloud: Google Cloud Platform (GCP), AWS

Core Skills: Machine Learning, Generative AI, NLP, Computer Vision, Agile Methodology

ACHIEVEMENTS

- Received a Client Focus award for contributions to the NVIDIA Physical AI project and was nominated for Team of the Quarter for establishing Zensar's Physical AI Foundry; received the Best Research Project Award at Texas A&M University.
